

A QUALITY ORIENTED COMPANY
Dentech Surgical (Pvt) Ltd.

Manufacturers & Exporters of Dental, Surgical, Orthodontic, Podiatry, Barber & Beauty instruments.

Beauty Instruments Catalogue

About us

Introducing Dentech as a high-tech and precision Dental, Orthodontic and surgical instruments manufacturing and exporting facility, goes back to about 50 years of consistent retrospect. The advent of this project was as merely a family business at a crucial time when it was extremely hard for the exporters to get some high precision Dental, Orthodontic, surgical, Podiatry & Beauty instruments custom-made from a negligible number of venders, we turned in as one distinct among them and with about 30 years of manufacture and local supplies, we developed certain items exclusively conforming to the international standards.

In 1992, we stepped in exports and have been exporting since then, to United States, United kingdom, Central & East Europe, Far East and South Pacific, our products with intricate quality and optimal accuracies. The best and the foremost logistics support is a carefully improvised Price-Structure, most convenient and comfortable for our valued buyers to compete and match the international market. In the mid-nineties, when International Organizational Standards became mandatory almost the world over, we have qualified CGMP, QSR, approved by FDA (USA), ISO 9001/2000 and CE Mark, subsequently.

We cordially invite our patrons abroad to float their respective inquiries without any hesitation; we assure you our best services, competitive prices and provision of samples where necessary.

How to Use Cuticle Nippers

Cuticle Nippers are a specialized tool designed to trim hang nails and dry, dead skin built up around the nail bed. Cuticle nippers are used in preparation for any nail treatment.

- ★ *Cuticle Nail Nippers, Jap Joints*
- ★ *Cuticle Nail Nippers, Box Joints*
- ★ *Nail Corner, Ingrown & Toe Nail Nippers*

All Nippers are completely hot drop forged from stainless steel in two categories;
 1) Lap joint 2) Box joint
 Each tool is machined and milled for perfection during assembly, which is then aligned to prevent slipping of the cutting tips. the angle of sharpness is designed to make low force cutting functions. Available in following finishes:
 Mirror, Satin, Sand-blasted, Gold-plated completely or partially, partially color coated.

Step 1.

Soak Your Cuticles

Prepare you cuticles by soaking your fingers in warm water for 5 minutes to soften your cuticles.

Step 2.

Push Back Cuticles

Now roll back and lift your cuticles from nail plate using a cuticle knife or cuticle pusher.

Step 3.

Clip Excess Dry Skin

Remove the excess cuticle and dry skin surrounding the nail by place the nippers over the excess cuticle. Firmly closing the blade of the nipper, then release and pull away. Make sure not to pull away before releasing because you can rip your cuticle if it is not fully clipped.

Step 4.

Buff Away Build-up & Imperfections

Lastly, remove any build up that may be left over and smooth imperfections with a nail buffing block using the rougher side.

How to use our Tweezers

1. Determine Your Eyebrows Starting Point

Hold a straight edge, such as a pair of tweezers or a eyebrow pencil, vertically along the side of the bottom of your nose (along the nostril). Make sure that the line touches the outermost edge your nose and the inside of your eye. The point where line and your eyebrow meets should be the starting point of your eyebrow. Mark this spot with a eyebrow pencil and repeat for the other eye, making sure space above the bridge of your nose is centered between both starting points. Remove the stray hairs that fall in between.

2. Determine Your Eyebrows Arch Point

Looking straight ahead at the mirror, hold the straight edge at an angle so that it lines up with the outermost edge of your nose and the outermost edge of your iris. The spot that the line intersects your eyebrow's top border is where the peak of your arch should begin. Mark the point with your eye pencil, then remove a row of hairs along the bottom, to enhance your arch. After the peak, shape the tail. Repeat with the other eye.

3. Determine Your Eyebrows End Point

Again, holding the line at an angle from the outermost edge of your nose to the outermost edge of your eye. This is where the eyebrow should end, mark this spot with your pencil, remove the strays beyond this line and repeat with the other eye.

4. Determine Your Brow Thickness

Use your pencil to draw a line just below the fullest part of your eyebrow. I recommend following the natural curvature of your eyebrows. You should end up with a 1/4" - 1/2" brow at it's thickest point. Pluck all the strays below the line and all strays above your eyebrow.

Waxing Eyebrows

The best type of wax for eyebrows is a cream wax heated up in a wax pot. These waxes are the most gentle and are great for the delicate, sensitive eye areas. Also, I recommend purchasing pre-cut strips for eyebrows.

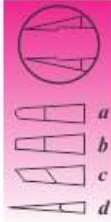

Before you start, you will need you need to decide on the shape of your brows and pull or pin-back hair (so you can see your eyebrows clearly). Pre-heat your wax and make sure you have access to a large mirror (not a hand-held). Your should wax you eyebrows in 4 stages as highlighted to the right.

Main Feature of our Handcrafted Razor Scissors

- * Professional Barber Razor Edge Shears
- * Professional Barber Shears & Scissors
- * Thinning Scissors
- * Hair Shapers & Razor Knives

*Cutting Styles & Techniques, Cutting Position Depending On Handle Type
 Point Cut, Blunt Cut, Slide Cut, Slice Cut Chipping, Fan Cut Thinning Styles
 & Techniques Thinning, Tapering, Blending, Texturizing.*

Material:

Japan Stainless Steel Aisi 1420b, Aisi 440a, French Cobalt Steel Sharpping.

Casting:

Liquid Metal Is Poured Into A Mold. If Properly Hardened, It Can Be Durable, But Will Not Hold The Edge As Long As A Forged Shear

Drop Forging:

A Weighted Mold Is Dropped With Great Pressure On Ta A Hot Ber Of Steel. The Alloy Is Pound Into A Desired Shaped Which Makes The Metal More Dense. The Blade Holds As Edge Longer And Is More Malleable.

Compression Forging:

The Metal Is Crushes Into A Desired Shape, Yielding A Highly Dense Metal. Compression Forging Makes It Possible To Have A Lighter Shear With Tremendous Strength.

Other:

Titanium Coating, Super Mirror Finish, Triple Annealed, Vacuum & Sub-zero Temering
